

workflow api (2025.11)

- 版本

- AINavi APP: 2.1.2.1
- EdgeHub: 2.3.2.0
- Workflow: 1.0.1.0

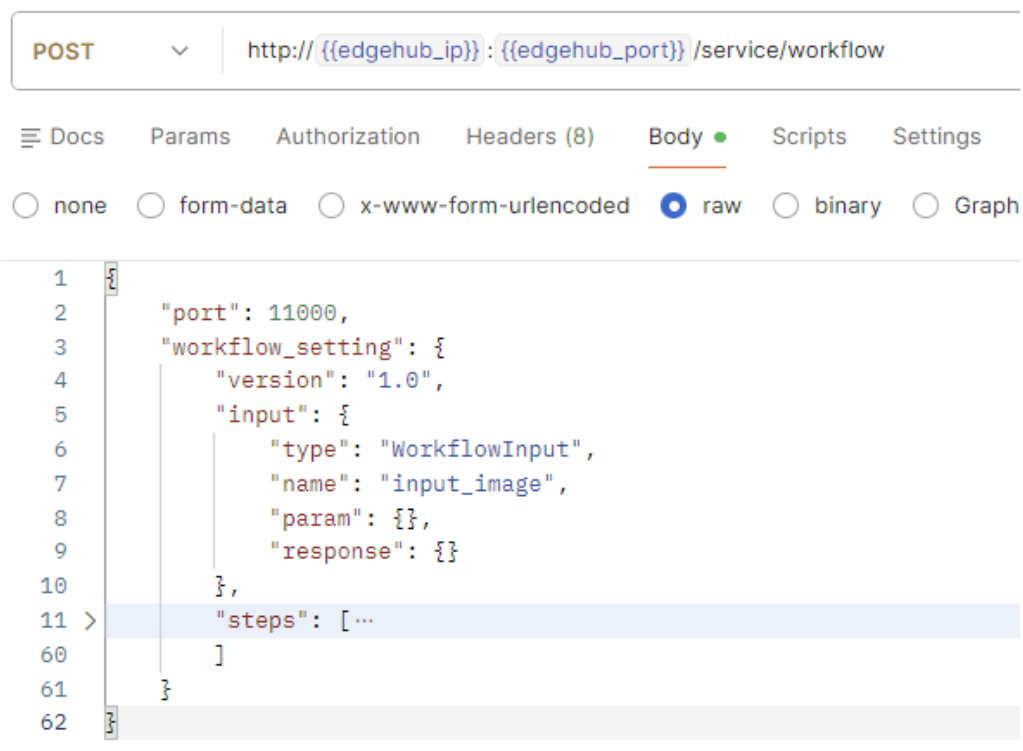

- ▼ 使用方式

1. 使用AINavi APP建立workflow之後，workflow設定檔會存在此路徑
"C:\Users\Public\Documents\Spingence\AINavi\workflows\
{workflow_name}\workflow_setting.json"

```
{
  "version": "1.0",
  "input": {
    "type": "WorkflowInput",
    "name": "input_image",
    "param": {},
    "response": {}
  },
  "steps": [
    {
      "type": "ObjectDetectionModel",
      "name": "objectdetectionmodelblock-2",
      "source": "input_image",
      "param": {
        "device": "gpu:0",
        "batch_size": 4,
        "model_path": "C:\\Users\\Public\\Documents\\Spingence\\AINavi\\models\\naviflow_obj_250814"
      },
      "response": {
        "enabled": true,
        "format": [
          "TLBRWH"
        ]
      }
    },
    { ... },
    { ... },
    { ... }
  ]
}
```

2. 使用AINavi EdgeHub 開啟workflow service

- [POST] http://{edgehub_ip}:{edgehub_port}/service/workflow
- workflow_setting可從步驟1裡面拿到
- 若要用同個uuid和port但更換workflow流程的話，直接更新workflow_setting後再下一次這支api即可

3. 丟圖給workflow service拿結果

[POST] `http://{{workflow_ip}}:{{workflow_port}}/workflow/run`

POST http://{{ip}}:11001/workflow/run
